

TECHNICAL FEATURES

The shelving system for tool storage are made of steel sheet which is shaped and reinforced to resist the most demanding of loads. They have been designed and produced in different sizes to solve the many storage problems that have been highlighted by various companies. Various drawers or adjustable shelves can be fitted inside the cabinets. The drawers are 100 mm high at the front and can slide on normal extension or full extension guide rails for fully extractable drawers. The internal panel of the drawer and the uniformly spaced perforated base allows for simple and rational division, exploiting to the fullest the entire volume of the drawer. The introduction and layout of the drawers or shelves within the cabinet can be quickly and simply performed, thanks to the four

slotted uprights that are fixed inside the cabinet in increments 25 mm.

Steel worktops with oil-resistant rubber covering

Steel worktops with black PVC covering

Steel worktops with wood effect PVC finish
