

PLASTIC CONTAINERS

Made from high density polyethylene, these plastic containers are mainly used in the food, textile and clothing industry. Capacities range from 300 to 650 l with an excellent weight-volume ratio. The containers are extremely versatile and can be used to transport loose, bulky products manually, with pallet trucks, with forklift trucks or on wheels. They can be stacked and their smooth bases and sides make it easy to clean them. They are weather resistant and have passed all the physical and mechanical tests to which they were subjected with excellent results.

colour

01 grey

PE-HD

Attention: not suitable for chemical liquids.

Load
150 kg

Art. F PT 1040 00 01

Overall dimensions:
mm 1000x640x655h
