

P.C.B. HANDLING FRAME SYSTEM (MEGAPRINT® - MINIPRINT®)

TABLE OF SUB-DIVISIONS

In the Megaprint® and Miniprint® systems, the choice of the type of divider comes about most easily and quickly if one consults the recommended table of sub-divisions. This determines the insertion point of the divider to the size of the P.C.B. to be inserted.

DIVISIONS

To simplify the insertion of dividers and P.C.B.'s in the Megaprint® and Miniprint® systems, each of the channels are identified numerically. Each channel is referred to by a number which corresponds exactly to the number of the channel opposite.

**Technical Specification of Standard System**  
 Width of channels . . . . . 2.5 mm  
 Depth of channels . . . . . 3.0 mm  
 Pitch of channels . . . . . 5.08 mm  
 Minimum sub-division of the system . . . 1.7 mm

The sub-division of the Megaprint® and Miniprint® systems is perfectly adaptable to the wide spread of sizes of P.C.B.'s, particularly as the sub-dividers have been designed in three variants. The variants are as follows:

- is the standard distance divider
- ⊖ is the minus distance divider
- ⊕ is the plus distance divider.

With this system one can vary the distance between dividers by a pitch of 1.7 mm.
