

CONDUCTIVE CONTAINERS MULTIBOX SERIES F PK

CONDUCTIVE CONTAINERS MULTIBOX SERIES F PK

The Multibox Series F PK containers are manufactured in four different sizes and are available in black conductive polypropylene for the storage of sensitive electronic components.

They are injection molded in a special conductive compound "FAMI 08 L" which has the characteristics to impede the formation of electrostatic charges or to discharge any charges already present.

The containers are only available in a standard width of 160 mm and a height of 100 mm. The design allows for the length of the container to be subdivided by removable partitions up to a maximum of 11 cells.

The containers can be fitted with a handle which can provide a multitude of tasks. 1. Manual carrying. 2. Manual withdrawing from storage shelves.

3. Prevention of container falling out shelves when partially withdrawn. The container front and partitions have space provided for the fitting of identification labels.

\*\*\*Partitions, handles and labels must all be ordered as separate item.
